

PLCTNIKOV N. N. Clinical features, diagnosis and treatment of liver fluke worm disease *Sovietskaya Meditsina*, Moscow 1949, 12 (21-22)

Report on 200 cases due to *Opistorchis felinus*. *Opistorchiasis* occurs commonly in Western Siberia along the rivers Ob and Irtysh. Smaller foci were described in the Dnieper basin in the Ukraine. Clinical symptoms are due to angiocholitis, angiocholecystitis, portal and (less common) biliary cirrhosis. Treatment with intravenous sodium antimony tartrate 1.0 % solution in 5.0 % glucose/saline (given in 2 days to total dose of 60 ml.) gave very encouraging results.

TITLE : Measures for the Control of Trichinelliasis  
ORIG. PUB. : Vestn. s.-kh. nauki, 1958, No 2, 73-79  
ABSTRACT : Due to systematic trichinoscopy, trichinelliasis has decreased in a number of foreign countries and in the Soviet Union. However, until recently, the individual outbreaks of the infection have been registered among humans as a result of the use of infected pork and, more frequently, of the meat of wild animals (badger, bear and others). Along with the strengthening of well-known

measures of control, it is necessary to carry out more accurate study of the natural foci of trichinelliasis and the ways of their contact with synanthropic foci. It is indispensable to clarify the epizootological role of carnivorous, rodent and insectivorous animals, as well as of saprophagous insects in the transmission of trichinelliasis to pigs.-- E. R. 31  
B+1

TOPIC TAGS: rolling mill, sheet metal, automation, steel

PURPOSE AND COVERAGE: The book describes experience in the rolling of steel plate in Soviet metallurgical plants and shows the prospects for the development of plate rolling mills. It considers in detail the heat of ingots and slabs, production of bimetallic sheet, equipment automation and the technical-economic indicators of rolling mills. The book is intended for engineers and technicians in production of steel plate and can be used by students in metallurgical higher educational institutions and technicums.

TITLE: Production of plate steel

PERIODICAL: Metallurg, no. 10, 1961, 38-39

TEXT: In spring 1961 interdepartmental courses were held on the study and generalization of advanced experiences made with plate rolling mills. The courses were organized by the GNTK RSFSR, the Chelyabinsk sovnrarknoz and the Chelyabinsk regional administration of NTO ChM. Among the 35 attendants of the courses there were leading workers, engineers and technicians from the Magnitogorsk, Kuznetsk, Nizhne-Tagil', Orsk-Khalilovo Combines, the Cherepovets, Ashinsk, Stalingrad, Vykasa, Kulebak, Chusovo, "Amurstal" Plants, the Leningrad Plant imeni Kirov, and other metallurgical and machinebuilding plants. The courses were also attended by workers from the Magnitogorsk Institute of Mining and Metallurgy, the Siberian Metallurgical Institute, TsNIIChM and designing organizations. During the courses it was stated that presently plates 4 mm thick and more are being rolled on 17 mills of the RSFSR. These mills have been operating for 20 years, only two of them are modern. On many mills manipulation is carried out manually,

Card 1/2

Production of plate steel

S/130/61/000/010/004/004  
A006/A101

requiring 5 - 6 rolling mill workers per shift, as e.g. on mill 2850 at the Ashinsk plant; mill 2530 of the Kulebak plant; mill 2750-2200 of the Taganrog plant; mill 2250 of the Kirov and 2100 of the Vyksa plant. On all the mills, with the exception of mill 2800 of the Cherepovets Metallurgical Plant, mill 2350 of MMK and mill 1150 of KMK, plates are rolled out of 0.5 - 7 ton ingots. The information includes technical details of machines and processes at various plants and contains a number of recommendations pertaining to the design of new mills with continuous furnaces, materials for rolls and bearings, and attachments to be used for rolling equipment.

TITLE: Method of making high-strength steel plates by pack rolling. Class 7,  
No. 184232

SOURCE: Izobret prom obraz tov zn, no. 15, 1966, 22

TOPIC TAGS: high strength steel, high strength steel plate, high strength  
steel sheet, steel plate rolling, steel sheet rolling

ABSTRACT: This Author Certificate introduces a method of pack rolling high-strength  
steel plates and sheets up to 10 mm thick and up to 3500 mm wide in a carbon steel  
envelope. The method includes cleaning, coating, making of the pack, heating,  
rolling and subsequent heat treatment. To ensure an accurate thickness of the plates

UDC: 621.771.23

Cord 1/2

L 44005-66

ACC NR: AP6029871

or sheets regardless of their location in the pack, the thickness of the envelope must be at least 0.6 of the total initial thickness of the high-strength plates of the pack. [ND]

242 p. 3,500 copies printed.

Ed.: M.K. Polekhov; Exec. Ed.: M.N. Kur'sina; Tech. Ed.: A. S.  
Polosina.

PURPOSE: This book is intended for scientific, engineering, and  
technical personnel of industrial geophysical exploration services.

COVERAGE: This is a collection of 14 articles by various authors on  
aspects of geophysical exploration. The material is divided in the  
articles may be divided into four categories: the physical and  
parts of rocks in specific geological regions; methods and pro-  
cedures used in industrial geophysical exploration; concepts in the  
theory of electrical exploration, and the economic involved in  
geophysical operations. Specifically, the authors discuss the  
geological structures of the central parts of the Russian Platform,  
southeastern Armenia, the West Siberian plains, the eastern part  
of the Siberian Platform, and the Minusinsk basins; electrical part  
frequency soundings; neutron logging; gamma spectrometry techniques,  
and the standard equipment and installations of the geophysical  
services of the petroleum industry in the USSR. References ac-
